

Increasing the Life of Your Melt Pressure Transducer

The standard **Transducers Direct** diaphragm is Inconel. This material gives our **melt pressure transducers** the traverse strength, toughness and increased life needed in most standard applications.

Depending on extrusion processes and the materials used, a different type of diaphragm materials and/or coating may be needed. We supply customers with diaphragms and coatings specifically suited to their needs and applications to extend the transducer life and reduce costs!

Melt Pressure Transducer Material Recommendations

For **Longer Life** we suggest:

Inconel Diaphragm	Excellent Abrasion and Corrosion Resistance
----------------------	--

Applications

Transducers Direct industrial **melt pressure transducers** are used successfully in a great variety of manufacturing and plastics **applications**.

Plastics Manufacturing, Blow Molding, Extrusion, Injection Molding, Forming, Fabrication, and Plastics Machinery are typical applications.
